Key Properties

- Very fine and homogeneous surface
- Easy to machine, low dust
- Low exotherm, can be machined after 9 h RT curing
- Layer thickness 25 mm without slump on vertical surfaces

Applications

- Large-scale models
- · Wind turbine blade models
- Boat models

Processing

The processing and material temperature should be between 20-25 °C, never below 18 °C.

Set up parameters for dispensing machine are available on request.

Check the mixing ratio before you start with the application.

Please ensure the constant supply of compressed air.

The longer the hose the higher the material pressure.

Avoid applying over 25 mm at once, for thicker layers it is recommended to apply the 2nd layer after the first one has gelled.

Storage

Original containers should be kept tightly sealed and stored at ambient temperatures (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label.

Partly used containers should always be sealed appropriately and used up as soon as possible.

Handling Precautions

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
